

Cancer Project - Assessment Rubric.

6 Mastered Outcome	5 Exceeded Expectations of Outcome	4 Fully met Outcome	3 Minimally Meeting Outcome Expectations	2 Approaching Meeting Outcome	1 Not yet Meeting Outcome
Is able to clearly and concisely describe which region of the body is impacted by the specific type of cancer in detail. Also able to make the connection to secondary sites within the body that might be impacted	Is able to clearly and concisely describe which region of the body is impacted by the specific type of cancer in detail.	Is able to describe which region of the body is impacted by the specific type of cancer in detail.	Briefly described which region of the body is impacted by the specific type of cancer.	Attempts to briefly describe which regions of the body are impacted by the specific type of cancer, but missing key information	No attempt to meet outcome
Clearly described the link between occurrence and age/sex. Also looks at two other common factors that might contribute to occurrence.	Clearly described the link between occurrence and age/sex. Also looks at one other common factor that might contribute to occurrence.	Clearly describe the basic link between occurrence and age/sex	Able to describe the basic link between occurrence and age/sex	Attempts to describe the basic link between occurrence and age/sex	No attempt to meet outcome
Clearly describes more than two biological and more than two environmental factors that influences the development of cancer	Clearly describes two biological and two environmental factors that influences the development of cancer	Clearly describes one biological and one environmental factor that influences the development of cancer	Briefly describes one biological and one environmental factor that influences the development of cancer	Attempts to describes biological and environmental factor that influences the development of cancer	No attempt to meet outcome
Clearly describes more than two methods of treatment, and examines potential side effects and success rates	Clearly describes two methods of treatment, and examines potential side effects and success rates	Clearly describes two methods of treatment	Clearly described one method of treatment	Attempts to describe one method of treatment	No attempt to meet outcome
Clearly describes mortality rates using at more than different sources of statistics.	Clearly describes mortality rates using at more than two different sources of statistics.	Clearly describes mortality rates using at least two different sources of statistics.	Able to identify mortality rates using different statistics	Attempts to identify mortality rates using different statistics.	No attempt to meet outcome
